

Aftermarket Breakout Table Jaws

DCR20

425 Aftermarket P/N 3434

Replaces FURUKAWA® P/N E083402050240

O.E.M. Style
Case Hardened
Serrated Jaw Face

425 Mfg's
Hardened Ball
Design

O.E.M. Problem:

The factory design is made from 100% the same material. This jaw designed can only be case hardened. It only has a thin layer of hardness like the shell on an M&M®. Once you wear thru the case, the jaw is soft and will wear quickly after the initial hardness is worn thru.

425 Manufacturing's Aftermarket Solution:

Our jaws are made from two different materials. Our holder stays soft, while our balls are heat treated 100% thru and retain hardness in every inch of the ball. So, if you are gripping your first piece of drill pipe or your 1,000th piece of drill pipe our balls are going to retain their hardness until they are completely worn out.
